Environmental Policy

Across ABF Ingredients (ABFI), we share an ambition to protect our future success while respecting the planet. We do this by embedding environmental sustainability into our strategic decisions to value natural resources and protect the environment for future generations.

1. Our approach

Visible leadership, robust governance, and shared accountability underpin our environmental stewardship. We comply with applicable environmental laws and regulatory requirements and implement locally relevant environmental activities.

We follow relevant ABF Group policies, standards and procedures, while seeking to exceed minimum requirements.

Our operations consider and implement activities, voluntary commitments and internationally recognised management systems to reduce our environmental risks and maximise the opportunities created by effective environmental management.

We continually strive to improve environmental performance and encourage the sharing of learning and good practice across ABFI, the wider ABF Group and, where appropriate, with suppliers.

Through ABF Group, we monitor, audit and report on our environmental performance, including energy and water consumption, waste generation and greenhouse gas emissions, to support continual improvement.

2. Leadership, governance and accountability

Every ABFI business' chief executive or managing director is accountable for the environmental performance of their business.

3. Our commitments

Our key focus areas are split into five categories.

3.1. Nature Positive

ABFI and our businesses:

- Respect biodiversity and nature by efficiently using natural resources in our operations and supply chain.
- Minimise pollution by managing emissions to air, releases to water and disposal of solid waste to landfill.
- Strive to avoid environmental incidents and maintain effective emergency response procedures to minimise the impact of any incidents which may occur.
- Undertake environmental assessments for significant plant and process changes and develop and implement appropriate mitigation plans.
- Contribute to communities through local, mutually beneficial environment-based activities as we focus on being good neighbours.

3.2. Climate change

ABFI and our businesses:

- Identify and manage climate-related risks and opportunities across our operations and supply chains, and develop appropriate plans to reduce greenhouse gas emissions, strengthen climate resilience and progress our contribution to ABF Group's 2050 net zero ambition.
- Use energy efficiently, and where possible, recover heat and invest in renewable energy.
- Create climate-conscious products that enable our customers and their end-users to manage their carbon footprints.
- Seek to transport products efficiently and minimise fuel use, taking account of customer needs, production arrangements and fleet operations.

3.3. Water stewardship

ABFI and our businesses:

- Assess and manage water-related risks, particularly in water-stressed areas.
- Work to reduce water withdrawals and improve water efficiencies in our operations, including recirculating water and harvesting rainwater.
- Recognise the importance of responsible water use and monitor our wastewater oxygen demand to manage water quality for surrounding communities and ecosystems.

3.4. Waste and circularity

ABFI and our businesses:

- Identify waste efficiencies and collaborate with others to use our waste as a raw material.
- Minimise product packaging where appropriate and continuously explore options to use packaging from recycled material.

3.5. Responsible sourcing

ABFI and our businesses:

- Require new suppliers to sign the ABF Supplier Code of Conduct which sets out expected standards in environmental management.
- Monitor supplier environmental performance and aim to collaborate with them to help reduce their emissions and environmental impacts.
- Require evidence from relevant suppliers that their sourcing is deforestation- and conversion-free and does not exploit indigenous people, workers or local communities.
- Commit to sourcing palm from sustainable and responsible sources.
