

Environmental Policy

Across ABF Ingredients (ABFI), we have a shared ambition to constantly adapt our operations to protect our future success while respecting the planet. We do this by **embedding sustainability** into our strategic decisions and actions in a way that values the planet's natural resources and protects the environment for future generations.

Our environmental approach

At **governance level**, we are committed to constantly managing our environmental impacts with accountability for environmental performance at Managing Director level across all our businesses.

At **management level**, we support each business to implement locally relevant environmental activities. We promote collaboration across our businesses to share environmental best practices and resources which might amplify our impact.

As a minimum, we comply with the applicable legislation of the countries in which we operate, and we strive to **go beyond what environmental legislation demands** of us. Our operations continuously consider and implement activities, voluntary commitments and internationally recognised management systems to reduce our environmental risks and maximise the opportunities created by effective environmental management.

Our environmental commitments

We are committed to doing business the right way, guided by our common purpose and underpinned by our values.

- We implement steps that **minimise our environmental impact** and move towards positive contributions while **strengthening our climate resilience**.
- We are efficient with our energy use and strive to reduce it further. Where possible, we **recover heat** and **invest in renewable energy**.
- We **work towards eliminating our greenhouse gases** and reaching net zero emissions by 2050.
- We are efficient with water use and find ways to improve operational efficiencies, including **recirculating water** and **harvesting rainwater**.
- We mitigate water pollution risk and monitor our wastewater oxygen demand to **manage water quality** and protect precious ecosystems.
- We reduce our waste and focus on a **circular economy approach** that reuses as much as possible by **collaborating with others** to use our waste as a raw material.

- We **recycle** materials that we are not able to reduce or reuse.
- We **reduce materials in our product packaging** and continuously explore options to use packaging from **recycled material**.
- We require new suppliers to sign our Supplier Code of Conduct which sets out expected standards in environmental management. We monitor supplier environmental performance and aim to collaborate with them to **help reduce their emissions and environmental impacts**.
- We require evidence from relevant suppliers that they are **not involved in deforestation or conversion**.
- We are committed to sourcing palm from **sustainable and responsible sources**.
- We **create climate-conscious products** that enable our customers and their end-users to manage their carbon footprints.
- We contribute to **communities** through local, mutually beneficial environment-based activities as we focus on being good neighbours.
