Sustainability Policy

Across ABF Ingredients (ABFI), we share an ambition to deliver positive economic, social and environmental outcomes. We do this by embedding sustainability into our strategic business decisions as well as providing products to help our customers with their sustainability ambitions.

1. Our approach

Visible leadership, robust governance and shared accountability underpin our sustainability approach. Sustainable thinking is embedded into strategic decisions, so we act now on what we know needs to change.

Three pillars of sustainability shape our actions: people, planet and customers. Our businesses use these pillars to inform their independent activities while sharing and drawing from each other's successes and learnings.

ABFI supports the United Nations Sustainable Development Goals (SDGs), with the following SDGs informing our strategic priorities and guiding our approach to delivering sustainable impact:

3: Good health and wellbeing
8: Decent work and economic growth
12: Responsible consumption and protection
13: Climate action

2. Leadership, governance and accountability

A dedicated Safety, Risk and Sustainability Director leads our action on sustainability. This role is supported by the ABFI Senior Leadership Team and collaborates closely with designated sustainability leads across each business.

3. Our commitments

People: we protect our people and all who partner with us.
See our separate Health, Safety and Wellbeing Policy for more detail.

Planet: we respect the planet's natural resources and protect the environment for future generations.
See our separate Environment Policy for more detail.

Customers: we provide our customers with safe, high-quality, future-ready products.

- Our scientists and research teams develop products that help our customers and end-users reduce their environmental footprints.
- We provide and continue to develop an increasing number of products that promote good health and wellbeing in humans and animals.
